

## CDC Recommended Vaccine Doses: Birth - 18 years

- In 1986, Congress passed the **National Childhood Vaccine Injury Act of 1986**, **granting vaccine manufacturers and physicians immunity from most lawsuits.**<sup>1</sup> Since the passing of this federal law, **the childhood vaccine schedule has more than tripled.** The CDC now recommends at least **69 doses of 16 vaccines by age 18,**<sup>2</sup> including **25 doses** in the first 6 months of life. Pharmaceutical companies are **developing more than 260 additional vaccines.**<sup>3</sup>
- The 1986 Act also established The National Vaccine Injury Compensation Program. As of 2/18/2020, this cumbersome federal court process has awarded **over \$4.28 billion** to **more than 7,000 victims of vaccine injury or death**, despite most claims being denied.<sup>4</sup>
- **Vaccines have NEVER been assessed for carcinogenicity**<sup>5</sup> despite containing known carcinogens, such as **glyphosate, formaldehyde, sulfuric acid, and/or thimerosal**, a mercury derivative in multi-dose flu shots approved for babies as young as 6 months old.<sup>6</sup>

**A liability free product that carries documented risks – including death - must NEVER be mandatory in a free country.**
