

# Is It Really Over?

Are the heavy-handed COVID-19 restrictions from the past 2+ years really finished?

- Young children were forcibly masked; some still are.
- Many lost their jobs over vaccine mandates; some are still struggling.
- In some cities, and for some establishments, people had to show their papers before gaining entrance to public places. History shows us how dangerous this is.

We can't allow these drastic changes, and the harm that has happened, to go without scrutiny.

## We need to ask...

- Why do proponents of vaccine mandates and mask mandates avoid debates? Why do they resort to name-calling and gaslighting?
- Why do those who promote the mainstream narrative use censorship to silence anyone who questions the narrative (i.e. online, social media)?
- Why do so many trust pharmaceutical companies that have collectively been fined over ten billion dollars for fraud and serious violations of safety standards in manufacturing?

It's **not really over** until we are protected legislatively - protected against extreme infringements of our freedoms.

**Support legislation that protects our medical freedom.**
